

# Repair of the connection part of the flush pipe

November 2009

Liquid: Salt water  
D1350mm Steel pipe, a work to thicken the pipe wall.

① Check the flaw at the connection part

② First, weld the flaw with a iron plate. Then, apply Magicawrap-Steel to smooth the swelling.

③ Wrap Butyl roll on the whole pipe, pushing it into the unevenness of the surface.

④ Then, wrap Magicawrap with 5 layers for anti-corrosion

⑤ After wrapping the Magicawrap, squeeze it at the same direction to make the resin even in the Magicawrap.

⑥ Finally, make the concrete base.
